

For 7COM1075 Data Science and Analytics Masters Project FPR, this assignment assesses the following module Learning Outcomes (from Definitive Module Document):

Successful students will typically be able to:

1. be able to critically evaluate advanced literature on data science and analytics topics relevant to their chosen project;
2. be able to refer to the findings of other academic writers to justify their chosen approach to the development of a solution, and to evaluate the outcomes of their project work;
3. be able to combine their knowledge of the subject, their reading of research papers and the outcome of their own investigations to conceive original ideas of their own;
4. be able to plan and manage a substantial body of work, identify any risks inherent in their chosen approach, and work independently with minimum supervision;
5. be able to select and use appropriate techniques and tools employed in data science and analytics in order to conduct a practical investigation into a particular data science and analytics problem.
6. be able to both critically evaluate and discuss the outcome of their project work in written and oral form;
7. be able to articulate the broader contexts of their work in relation to legal, social, ethical, and professional issues, and assess the economic impact of their project.
